

**NATIVE PLANTS FOR CREATING POLLINATOR
HABITAT IN CENTRAL NY**
Prepared by Michael Hough

As part of SUNY Cortland's Bowers Hall renovation, a bioswale was constructed and planted in the Fall of 2013. The bioswale is designed to temporarily hold stormwater runoff from the building and adjacent lawn areas to filter it and increase groundwater infiltration. The site was overtaken by weeds during the 2014 growing season as it remained under contract. A renovation project was initiated by faculty in the spring of 2015 to address this issue. The initial phase of the renovation involved intensive weeding and planting of over 800 plugs of native plants produced in the college greenhouse. The meadow was mowed and additional species were interseeded in the fall. Additional plugs will be produced in 2016 and planted in the spring.

What follows is a list of plants proposed or currently growing in the bioswale. All are native to Eastern North America, though some are not native to Central New York. Since the existing trees on the site are relatively young, the majority of plants are adapted to growing in areas that receive sunlight for most of the day. As the trees mature more shade tolerant plants will likely be added. The plants have been chosen to provide a multitude of ecosystem functions. Many of them provide nectar sources for honeybees, native bees, flies, butterflies, moths, and hummingbirds. Others serve as host plants for the larvae of native butterflies and moths. The showy asters, sunflowers, and similar plants provide abundant seeds for songbirds.

Most of the seeds used for growing the plugs were collected locally or donated by people from Cornell Plantations and the Finger Lakes Native Plant Society. The following selection of regional nurseries frequently carry potted plants of the species indicated in the list.

The Plant List

Plants are arranged in categories and alphabetically by scientific name. Species with an asterisk are not native to Central NY. The bloom times provided are approximate.

Light requirements:

 = Full Sun  = Part Sun  = Shade

Soil moisture requirements:

W = Wet **M** = Mesic (medium moisture) **D** = Dry

Wildlife values:

- Nectar source for bees

- Nectar source for butterflies and moths

- Food plant of native butterfly and moth caterpillars

- Nectar source for hummingbirds

- Food source for seed eating birds
